

Xiaochuan Dai is an Associate Professor at the School of Biomedical Engineering, Tsinghua University. He obtained his B.Sc. degree from Peking University in 2010 and a Ph.D. from Harvard University in 2015, following which he carried out postdoctoral research at Harvard University, Tufts University and MIT. His research focuses on seamless integration of nanoelectronics and living tissues/animals, with emphasis on tissue-scaffold-mimicking electronics, cyborg tissues, brain-machine interfaces. Dr. Dai has authored over 20 articles in journals such as Science, Nature Nanotechnology, Nature Materials, and PNAS. He has received honors such as the MIT Technology Review 35 Under 35 China, inaugural APBEC Young Scholar, the Beijing Nova Program, etc.
